Placing Your Order...

You can mail this form, with payment, to our office (address on front) or drop it in our mail slot. You can also pre-pay for an order through our website. We'll give you a call when it is ready for pick up.

Sorry, we do not have the capacity to ship orders.

Window Measurements and Planning

Before you purchase your reusable window kits, it's a good idea to take stock of the needs in your home. You may be able to save money by purchasing an extra large kit and using it for two smaller windows, or prioritize which windows you want to cover first. Window kits work best when surfaces are clean and dry. You want to be sure any moisture problems are addressed before weatherizing your windows.

When measuring, allow an additional 2-3 inches on all sides. Remember, you will be adhering the frame pieces along the window frame or molding, not on the edge of the glass.

Another thing to keep in mind is that you may remove the plastic to wash it, and re-hang later. If the plastic sheeting is cut too close to the frame pieces, you will have an incredibly difficult time re-hanging the plastic.

Tip sheets are available on our website, or join us at one of our free workshops!

Check our website for the latest schedule, www.CommunityEnergyProject.org, or call 503.284.6827 ext 108.

Oversize Window/Patio Door Kit (For windows/doors larger than 72" x 82" only)

You can weatherize a patio door pretty much like a large window, except for the bottom. The frame pieces do not work well on the bottom of a patio door. For the bottom, just make the plastic extra long (about 4-6"), to allow for you to place a "door snake" or other weight on the bottom section. Plan for an additional 3" on the top and two sides, and 6" on the bottom. Once you have your measurement, then use the worksheet to the right.

Example: 8.5' x 10' oversized window = 85 sq.ft.

Price: 85 sq ft. x \$0.47/sq ft = **\$39.95**

Note: The roll of plastic is 76" long (6'4"), so if **both dimensions** are over 76", we will joint two pieces of plastic sheeting with clear polyvinyl tape.

Cost Calculation Worksheet

Window #1: _____ ft h x _____ ft w = _____ sq ft.

Kit #1 Price: _____ sq.ft. x \$0.47 sq.ft. = \$

Window #2: _____ ft h x _____ ft w = _____ sq ft.

Kit #2 Price: _____ sq.ft. x \$0.47 sq.ft. = \$

Total Oversize Kit Order \$

Write total amount on the front of this order form.
